DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a liquid crystal display module for a notebook computer, classified in class D14, subclass 371+.
- II. Claim 23, drawn to a liquid crystal display module, classified in class 349, subclass 58.
- III. Claims 9-21, drawn to a method of fabricating a liquid crystal display module for a notebook computer, classified in class D14, subclass 371+.
- IV. Claim 22, drawn to a method of fabricating a liquid crystal display module, classified in class 349, subclass 58.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the main support does not need a

protrusion. The subcombination has separate utility such as a display module for a desktop personal computer.

Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) ~~that the product as claimed can be made by another and materially different process~~

(MPEP § 806.05(f)). In the instant case the items may be flipped over and the order of assembly can be reversed. A fixture or jig may also be used to properly align the items during assembly.

Inventions IV and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the items may be flipped over and the order of assembly can be reversed. A fixture or jig may also be used to properly align the items during assembly.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy L Rude whose telephone number is (703) 305-0418. The examiner can normally be reached on Monday through Thursday.
